Apple macOS In June 2012, AutoCAD was released for the Apple platform. This version of AutoCAD comes free with the purchase of a new Mac computer or as a standalone download for existing users. The cross platform application suite, DesignSpark, has become AutoCAD's primary competitor. DesignSpark is included with the $10,000 annual subscription fee for Autodesk subscription services and is an all-in-one tool for designing and rendering, including visualization, rendering, presentations, animations, drawing, drafting, and 3D modeling. The client software can be configured so that a single CAD client application can be accessed from many computers, using the cloud. Users of the app can be notified when updates are available for their model data, receive notification when others are working on the same model, and can collaborate on the same model with others using the app. AutoCAD Architecture software offers tools for architectural design of buildings and structures. The software was included in Apple's suite of the Cocoa technologies for Mac OS X. In contrast to the previous versions of AutoCAD, the client does not

include Adobe Photoshop-like "Photo-viewer" layer masks, and is not based on 3-D modeling. The software is not multitasking and cannot be operated while other applications are active. Other versions of AutoCAD for Mac, such as AutoCAD LT, are bundled with other applications such as the Adobe Creative Suite or 3D Studio Max. Platforms The AutoCAD platform is available for Microsoft Windows, Apple Mac OS X, and macOS. AutoCAD formerly supported the Amiga, Atari ST, Hewlett Packard (HP) Unix platform and Linux, but it was dropped in 2003. In 2006, the Windows version of AutoCAD LT was released and the version for Mac OS X was released in 2007. A Linux version of AutoCAD LT has been released on the Autodesk Forge website. For the Unix platform, the most recent release, AutoCAD LT 2018, was released for Linux on April 11, 2018. History AutoCAD was originally developed by Gary Finney and Dan Schulman in 1982. They were part of the 1980s team at the University of Utah, which developed a computer-aided design (CAD) system, Dragon II. Dan Schulman left the University of Utah team to create his own CAD system in 1986, a1d647c40b
