Speech is a complex communication system that includes cognitive skills that include perception, attention, and memory, and an interaction of the complex nervous systems of the nervous system that include both the peripheral nervous system and the central nervous system. Other behaviors that are part of the communication system include a gait that varies as a function of the surface on which an individual is walking, and a stance that varies as a function of the weight-bearing activity of an individual, such as standing, walking, running, jumping or climbing. As a result, speech and gestures are at least partially dependent on a complex interplay of the sensorimotor control systems that are involved in the production of speech and gestures.
